Summary

Excited to tackle new challenges in software development and deliver impactful, high-quality solutions.

Education

Pune Institute of Computer Technology, B.E. in Computer Engineering Sept 2023 – present
CGPA: 9.85/10

Projects

Cube Timer
An app made for the GNOME desktop to track 3x3 Rubik's Cube solves.
- Launched on Flathub on Jan-2025 and has 700+ users.
- Uses the Libadwaita framework and follows the GNOME HIG.

micrograd-cpp
A reimplementation Andrej Karpathy's micrograd in C++.
- Contains a custom 'Value' data-type with automatic gradient tracking.
- Implemented backpropagation to compute gradients efficiently.
- Built a small neural-network API on top of the autograd engine to train models.

PokeRush
A simple pokeDex for Android.
- Explore and favourite pokemons.
- Uses the pokeAPI under the hood.

Skills

AI and Machine Learning: Good understanding of neural-networks and use of libraries like scikit-learn. Deployment of machine learning models in flutter applications

Flutter Development: Design and development of high-quality cross-platform flutter applications with clean architecture and following the Material design language

Linux Application Development: Design, development and deployment of native linux applications following the GNOME human interface guidelines

Linux System Administration: Experienced in managing linux system, including package management, shell scripting, system configuration, and server maintenance

Containerization: Used Docker and Podman to deploy self-hosted services and to create development environments for isolation, testing and reproducibility

Competitive Programming: Good algorithmic thinking and problem solving

Achievements

- Peak rating of 1389 (Pupil) on Codeforces with a best contest rank of 1284.
- 3 stars on CodeChef with a max rating of 1667 and best contest rank of 35.
